## MUMSHAD MANNAMBE

I am an IT Solutions Architect and specializes in Cloud, Automation and DevOps and the author of Top 3% of Udemy's courses. I am passionate about learning new technology and teaching. I believe the best way to learn is to learn by doing and in a fun way. I have authored multiple courses on DevOps, Cloud and Automation technologies and I teach over 88,000 Students world wide. My courses focus on providing students with an interactive and hands-on experience in learning new technology that makes learning really interesting.

# Ansible

# Introduction

## Why Ansible?

Provisioning

Configuration Management

Continuous Delivery

Application Deployment

Security Compliance

Scripts

- **Coding Skills**
- Maintenance

- Simple
- Powerful
- Agentless

## Scripts

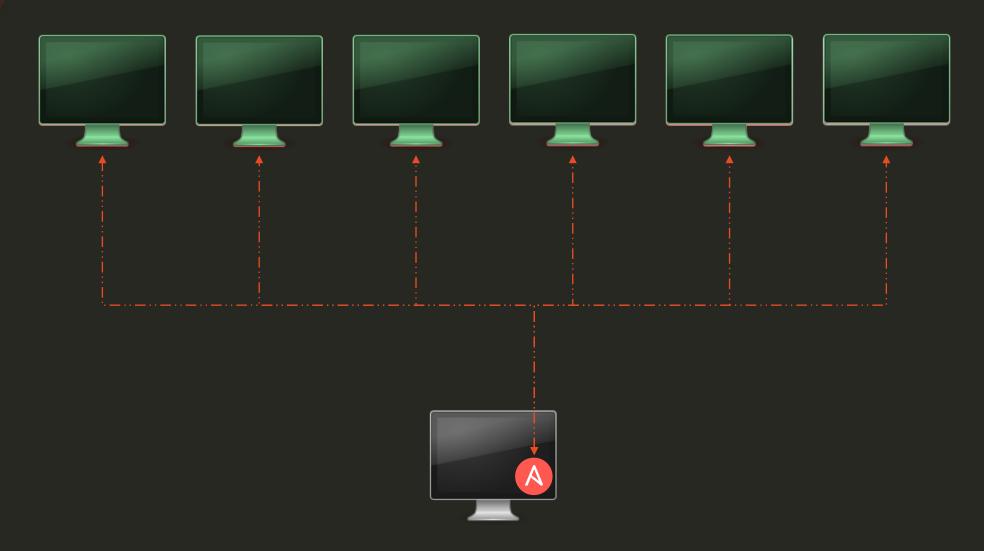

## vs Ansible Playbook

```
#!/bin/bash
# Script to add a user to Linux system
if [ $(id -u) -eq 0 ]; then
    $username=johndoe
    read -s -p "Enter password : " password
    egrep "^$username" /etc/passwd >/dev/null
    if [ $? -eq 0 ]; then
        echo "$username exists!"
        exit 1
    else
        useradd -m -p $password $username
        [ $? -eq 0 ] && echo "User has been added
to system!" || echo "Failed to add a user!"
    fi
fi
```

```
- hosts: all_my_web_servers_in_DR
  tasks:
    - user:
        name: johndoe
```

# Ansible

# Install

Redhat or CentOS - \$ sudo yum install ansible

Fedora –

Ubuntu –

\$ sudo dnf install ansible

\$ sudo apt-get install ansible

PIP -

\$ sudo pip install ansible

### Additional Options:

- Install from source on GIT
- Build RPM yourself

Ansible Control

Machine

- Playbooks
- Inventory
- Modules

## +

## Install Control Node on Redhat or CentOS

### Install via PIP

### Install pip if not present

- \$ sudo yum install epel-release
- \$ sudo yum install python-pip

### Install Ansible using pip

\$ sudo pip install ansible

### Install Specific Version of Ansible using pip

\$ sudo pip install ansible==2.4

### Upgrade Ansible using pip

\$ sudo pip install --upgrade ansible

# Ansible

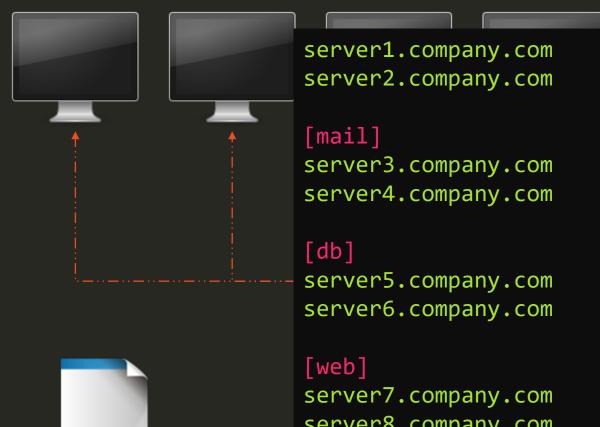

# Inventory

## inventory

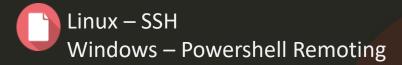

inventory

/etc/ansible/hosts

server8.company.com

## More on inventory files

```
server1.company.com
server2.company.com
server3.company.com
server4.company.com
```

```
ansible_connection=ssh
ansible_connection=winrm ansible_user=admin
ansible_connection=ssh
ansible_connection=winrm
```

ansible\_user=root ansible\_ssh\_pass=P@#

```
localhost ansible_connection=localhost
```

### **Inventory Parameters:**

- ansible connection ssh/winrm/localhost
- ansible\_port 22/5986
- ansible\_user root/administrator
- ansible ssh pass Password

Security: Ansible Vault

# Ansible

# Playbooks

## Ansible playbooks

#### # Simple Ansible Playbook

- Run command1 on server1
- Run command2 on server2
- Run command3 on server3
- Run command4 on server4
- Run command5 on server5
- Run command6 on server6
- Run command7 on server7
- Run command8 on server8
- Run command9 on server9
- Restarting Server1
- Restarting Server2
- Restarting Server3
- Restarting Server4
- Restarting Server5
- Restarting Server6
- Restarting Server7

#### # Complex Ansible Playbook

- Deploy 50 VMs on Public Cloud
- Deploy 50 VMs on Private Cloud
- Provision Storage to all VMs
- Setup Network Configuration on Private VMs
- Setup Cluster Configuration
- Configure Web server on 20 Public VMs
- Configure DB server on 20 Private VMs
- Setup Loadbalancing between web server VMs
- Setup Monitoring components
- Install and Configure backup clients on VMs
- Update CMDB database with new VM Information

## Playbook

- Play Defines a set of activities (tasks) to be run on hosts
  - Task An action to be performed on the host
    - Execute a command
    - > Run a script
    - > Install a package
    - ➤ Shutdown/Restart

### playbook.yml

name: Play 1

hosts: localhost

tasks:

- name: Execute command 'date'

command: date

- name: Execute script on server

script: test\_script.sh

- name: Install httpd service

yum:

name: httpd
state: present

- name: Start web server

service:

name: httpd
state: started

## Playbook format

playbook.yml

```
name: Play 1
 hosts: localhost
 tasks:
         - name: Execute command 'date'
          command: date
         - name: Execute script on server
          script: test_script.sh
name: Play 2
hosts: localhost
tasks:
       - name: Install web service
         yum:
                name: httpd
                state: present
         hame: Start web server
         service:
                name: httpd
                state: started
```

## Hosts

### playbook.yml

```
name: Play 1
hosts: localhost
tasks:
 - name: Execute command 'date'
   command: date
 - name: Execute script on server
   script: test_script.sh
 - name: Install httpd service
   yum:
    name: httpd
    state: present
 - name: Start web server
   service:
    name: httpd
    state: started
```

### inventory

### localhost

server1.company.com
server2.company.com

### [mail]

server3.company.com
server4.company.com

### [db]

server5.company.com
server6.company.com

### [web]

server7.company.com
server8.company.com

### playbook.yml

```
name: Play 1
hosts: localhost
tasks:
- name: Execute command 'date'
   command: date
 - name: Execute script on server
  script: test_script.sh
 - name: Install httpd service
  yum:
   name: httpd
   state: present
 - name: Start web server
   service
   name: httpd
   state: started
```

- Execute Ansible Playbook
- Syntax: ansible-playbook <playbook file name>

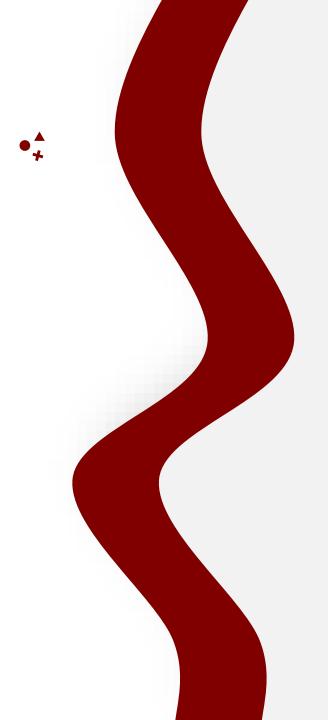

www.kodekloud.com

- Setting up Ansible on VirtualBox
- Introduction to YAML
- Inventory Files
- Playbooks
- Modules
- Variables
- Conditionals
- Loops
- Roles

## Ansible

# Modules

### modules

- System
- Commands
- Files
- Database
- Cloud
- Windows
- More..

- Win\_copy
- Win\_command
- Win\_domain
- Win\_file
- Win\_iis\_website
- Win\_msg
- Win\_msi
- Win\_package
- Win\_ping
- Win path
- Win\_robocopy
- Win\_regedit
- Win\_shell
- Win\_service
- Win\_user
- And more

### command

### Executes a command on a remote node

parameter chdir	comments cd into this directory before running the command
creates	a filename or (since 2.0) glob pattern, when it already exists, this step will <b>not</b> be run.
executable	change the shell used to execute the command. Should be an absolute path to the executable.
free_form	the command module takes a free form command to run. There is no parameter actually named 'free form'. See the examples!
removes	a filename or (since 2.0) glob pattern, when it does not exist, this step will <b>not</b> be run.
warn (added in 1.8)	if command warnings are on in ansible.cfg, do not warn about this particular line if set to no/false.

### playbook.yml

name: Play 1

hosts: localhost

tasks:

- name: Execute command 'date'

command: date

- name: Display resolv.conf contents

command: cat /etc/resolv.conf

- name: Display resolv.conf contents
command: cat resolv.conf chdir=/etc

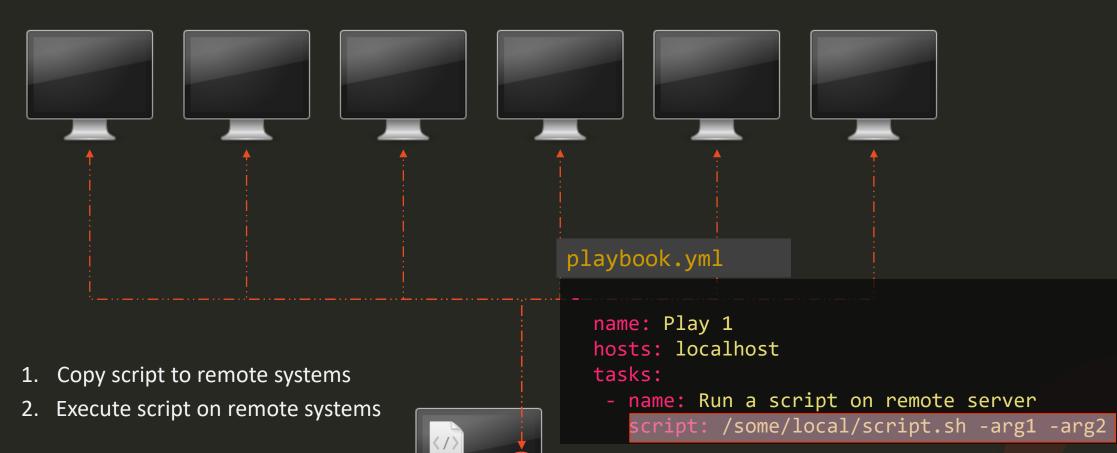

- name: Display resolv.conf contents
command: mkdir /folder creates=/folder

- name: Copy file from source to destination
copy: src=/source\_file dest=/destination

## script

• Runs a local script on a remote node after transferring it

### Service

• Manage Services – Start, Stop, Restart

### playbook.yml

name: Start Services in order
hosts: localhost

tasks:

- name: Start the database service

service: name=postgresql state=started

- name: Start the httpd service
 service: name=httpd state=started

- name: Start the nginx service

service:

name: nginx
state: started

### playbook.yml

name: Start Services in order

hosts: localhost

tasks:

- name: Start the database service

service:

name: postgresql
state: started

## idempotency

Why "started" and not "start"?

"Start" the service httpd "Started" the service httpd

Ensure service httpd is started

If httpd is not already started => start it
If httpd is already started, =>do nothing

#### Idempotency

An operation is idempotent if the result of performing it once is exactly the same as the result of performing it repeatedly without any intervening actions.

### lineinfile

Search for a line in a file and replace it or add it if it doesn't exist.

```
nameserver 10.1.250.1
nameserver 10.1.250.2

playbook.yml
-
   name: Add DNS server to resolv.conf
   hosts: localhost
   tasks:
    - lineinfile:
        path: /etc/resolv.conf
        line: 'nameserver 10.1.250.10'
```

### /etc/resolv.conf

/etc/resolv.conf

```
nameserver 10.1.250.1
nameserver 10.1.250.2
nameserver 10.1.250.10
```

nameserver 10.1.250.10

#### script.sh

```
#Sample script
echo "nameserver 10.1.250.10" >> /etc/resolv.conf
```

#### /etc/resolv.conf

```
nameserver 10.1.250.1
nameserver 10.1.250.2
nameserver 10.1.250.10
nameserver 10.1.250.10
```

## Ansible

# Variables

### Variable

Stores information that varies with each host

#### inventory

```
Web1 ansible_host=server1.company.com ansible_connection=ssh ansible_shh_pass=P@ssW db ansible_host=server2.company.com ansible_connection=winrm ansible_shh_pass=P@ssW Web2 ansible_host=server3.company.com ansible_connection=ssh ansible_shh_pass=P@ssW
```

### Playbook.yml

name: Add DNS server to resolv.conf
hosts: localhost

tasks:

- lineinfile:

path: /etc/resolv.conf

line: 'nameserver 10.1.250.10'

### variables

variable1: value1
variable2: value2

## Using variables

```
Playbook.yml
-
  name: Add DNS server to resolv.conf
hosts: localhost
  vars:
    dns_server: 10.1.250.10

  tasks:
    - lineinfile:
        path: /etc/resolv.conf
        line: 'nameserver {{ dns_server }}'
```

```
name: Set Firewall Configurations
hosts: web
tasks:
- firewalld:
   service: https
   permanent: true
   state: enabled
```

- firewalld:

port: 0{{/http\_port }}'/tcp permanent: true

state: disabled

- firewalld:

port: '{{-snmp\_port }}'/udp

permanent: true state: disabled

- firewalld:

source: '{{ inter\_ip\_range }}'/24

Zone: internal state: enabled

```
#Sample Inventory File
Web http_port=
                                   inter ip range=
                 snmp port=
#Sample variable File - web.yml
```

http\_port: 8081 snmp\_port: 161-162

inter\_ip\_range: 192.0.2.0

```
{{
       }}
```

Jinja2 Templating

```
source: {{ inter_ip_range }}
```

source: '{{ inter\_ip\_range }}'

source: SomeThing{{ inter\_ip\_range }}SomeThing
